DETAILED ACTION

Election/Restriction

1. This application contains claims directed to the following patentably distinct species of the claimed invention:

_____ A. Claims 9-10, where coupling the flow tube means to the base involves using an adhesive.

A'. Claim 11, where coupling the flow tube to the base involves using an O-ring.

_____ B. Claims 18-19, where securing the fixed element comprises the use of adhering.

B.' Claim 20, where the step of securing the fixed element comprises threading.

B." Claim 21, where the step of securing comprises the step of forming a locking hole into which a locking mechanism is inserted.

D. Claim 28, where connection comprises ultrasonic welding.

D.' Claim 29, where connection comprises heat tip welding.

_____ D." Claim 30, where connection comprises laser welding.

_____ E. Claim 33, affixing a resistance temperature measuring device.

E.' Claim 34, affixing a infrared temperature measuring device.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held

1, 17, 26, 32

Art Unit: 3726

to be allowable. Currently, claims 1, 17, 26, and 32 generic to the above alternative species within their respective groups.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

2. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any

amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

3. With regard to applicants arguments presented in paper number 4 with respect to the restriction, the examiner believes that they are without merit, for the following reasons.

The examiner believes that the groups are properly restrictable because, at the very least, the method can be used to manufacture a Coriolis flowmeter wherein the driver affixed to the tube flow means is not used for vibrating the tube flow means at the resonant frequency of the tube flow means. Further, the status of the two inventions is separate because they do properly belong in different classes. The MPEP may not be law, but it is to be used by examiners in carrying out their examination functions.
